**Esistenza di cammini in cui
si alterna il colore dei vertici
(variante di Floyd-Warshall)**

Docente: Raffaella Rizzi

[Problema]

INPUT:

- $G = (V, E)$, grafo orientato ~~con archi pesati (pesi positivi)~~,
dove $V = \{1, 2, \dots, n\}$

~~— $W = [w_{ij}]_{n \times n}$, matrice dei pesi~~

- $Col : V \rightarrow C$, con $C = \{\text{"red"}, \text{"green"}\}$

OUTPUT:

per ogni coppia di vertici i e j , verificare se esiste un cammino
in cui si alternano vertici rossi e vertici verdi

(**NB:** se $i = j$, il cammino $\langle i \rangle$ banalmente verifica
tale condizione)

[Sottoproblemi per i vertici i e j]

Sottoproblema di dimensione k

Verificare se esiste un cammino P_{ij}^k da i a j in cui si alternano vertici rossi e vertici verdi, tale che, se $k > 0$ eventuali vertici intermedi appartengono a $\{1, 2, \dots, k\}$ e se $k=0$ non ci sono vertici intermedi

$$0 \leq k \leq n$$

Numero di sottoproblemi per i e j: $n+1$

Numero totale di sottoproblemi: $(n+1)n^2$

[Coefficienti per i vertici i e j]

Coefficiente del sottoproblema di dimensione k

e_{ij}^k è **TRUE** se e solo se esiste un cammino P_{ij}^k da i a j in cui si alternano vertici rossi e vertici verdi, tale che, se $k > 0$ eventuali vertici intermedi appartengono a $\{1, 2, \dots, k\}$ e se $k = 0$ non ci sono vertici intermedi

$$0 \leq k \leq n$$

Numero di coefficienti per i e j: $n+1$

Numero totale di coefficienti: $(n+1)n^2$

[Eq. Ricorrenza - Casi base]

$k = 0$

$$i = j \quad \Rightarrow e_{ij}^k = \text{TRUE}$$

$$i \neq j \wedge (i,j) \in E$$

$$\text{Col}(i) = \text{Col}(j) \quad \Rightarrow e_{ij}^k = \text{FALSE}$$

$$\text{Col}(i) \neq \text{Col}(j) \quad \Rightarrow e_{ij}^k = \text{TRUE}$$

$$i \neq j \wedge (i,j) \notin E \quad \Rightarrow e_{ij}^k = \text{FALSE}$$

$$e_{ij}^k = E1 \vee E2$$

[Risultato]

$e_{ij}^n \equiv \text{TRUE}$ se e solo se esiste un cammino da i a j in cui si alternano vertici rossi e vertici verdi che ha vertici intermedi in $\{1, 2, \dots, n\}$

[Risultato

$e_{ij}^n \equiv \text{TRUE}$ se e solo se esiste un cammino da i a j in cui si alternano vertici rossi e vertici verdi

[Risultato

$e_{ij}^n \equiv \text{TRUE}$ se e solo se esiste un cammino da i a j in cui si alternano vertici rossi e vertici verdi

risultato $\equiv e_{ij}^n$
